

## ✓ Congratulations! You passed!

[Go to next item](#)Grade received **100%** To pass 80% or higher

1. How many columns are used in a desktop grid system?

1 / 1 point

- ☒ 12
- ☐ 8
- ☐ 4

✓ **Correct**

Correct! A 12-column grid system is typically used on a desktop.

2. Typography hierarchy consists of three sections. Select all that apply.

1 / 1 point

☒ Body

✓ **Correct**

Correct! The body text's primary function is to convey the information you want.

☐ Content

☒ Heading

✓ **Correct**

Correct! The heading is the first section the viewer should see, so the most crucial information should be placed here and used to draw the viewer's attention.

☒ Sub-heading

✓ **Correct**

Correct! The subheading divides the design layout into different sections, expanding the header information and giving the reader more information about the body text.

3. Set the number of typefaces to two or three to avoid user confusion and distraction from the information and messages you are trying to convey on your website.

1 / 1 point

- ☐ False
- ☒ True

✓ **Correct**

Correct! You need to set the number of typefaces to two or three to avoid user confusion and distraction from the information and messages you are trying to convey on your website.
