1. UX is an iterative process that solves usability problems.

1 / 1 point

- ☒ True
- ☐ False

✓ **Correct**

That's correct. UX or User Experience is an iterative process that solves usability problems and makes a product or service usable, enjoyable, and accessible.

2. What is a wireframe in UX design?

1 / 1 point

- ☒ It's representation of the interface concerned with placement and hierarchy of content and functionalities.
- ☐ It's a simulation of the final functional product
- ☐ It's a complete design of the product
- ☐ It's a 3D printed view of the project

✓ **Correct**

Correct. It's representation of the interface concerned with placement and hierarchy of content and functionalities.

3. Which of the following statements about designing forms are true?

0 / 1 point

- ☐ Time should be spent on good form design to create an appealing and approachable form that represents the brand.
- ☐ Forms are not an important part of user experience and can be designed quickly without considering the user's needs.
- ☒ It is important to design forms from the user's perspective to create a good user experience.

✓ **Correct**

That's correct. Forms are an important part of user experience, which is why time and effort should be spent on designing good forms from the user's perspective.

- ☐ Forms are only used to collect information for the stakeholder's benefit, so it is not worth putting effort into designing them.

4. Which of the following is true about responsive design? Select all that apply.

1 / 1 point

- ☐ Responsive design involves creating separate versions of a website or app for different devices.
- ☒ Responsive design is a design approach that ensures a website or app looks good on all devices, regardless of screen size or resolution.

✓ **Correct**

That's correct. Responsive design ensures good visual appearance on all devices.

- ☒ Responsive design is a technique that automatically scales and rearranges the layout of a website or app to fit the screen size and resolution of the device it is being viewed on.

✓ **Correct**

That's correct. Responsive design automatically adjusts layout for different screens.

- ☐ Responsive design only applies to desktop devices and is not necessary for mobile devices.

5. How many columns are generally used in a desktop grid system?

1 / 1 point

- ☐ 8
- ☐ 4
- ☒ 12

✓ **Correct**

That's correct. 12 column grids are commonly used in desktop designs. This allows for a high level of flexibility in terms of layout and design, as designers can use different combinations of columns to create a wide range of layouts.
