

Your development team is tasked to develop an app. Your project manager leads you to work in an Agile way of working where tasks are planned and executed in a two-week cycle. This is done to ensure which of the following benefits?

Efficiency.

You, as a developer, will normally work on a project alongside many developers and team members with other skillsets.

You and your team need to be efficient to make the project a success. To achieve this, you and your team normally work in an agile process.

You are part of a development team and one of your colleagues ask you if a Centralized Version Control system (CVS) contains a server and a client. What would your answer be?

Yes, A Centralized Version Control system (CVS) contains a server and a client.

You are working with a team of developers on an app to help people work more efficiently. While you are developing this app the codebase you are working on goes through many revisions as each potential change gets peer-reviewed and given the ok. What is this system of checks that provides a detailed record called?

Version control, is the term given to the system used to keep a detailed record of all changes to the codebase.
