

**In the final assignment of this course, you will be responsible for redesigning an online ordering element and a table reservation element following the UX UI process you will learn.**

False. You will learn the UX UI process by following the redesign of the online ordering element. Then, you will get instructions to redesign the table reservation element as a final project.

**You just started working in a small company. You expected to work exclusively on the UI, or the user interface, of the website since that is what you really like to do. Your colleagues are asking you to conduct a UX, or user experience, study to find out how customers feel while using the website. Do you think this is a fair expectation of your colleagues?**

Yes. Typically, in a smaller company, a "designer" might need to fulfill both the roles of UX and UI. Researching user needs, designing solutions, and coding them up.

**In your final course project, you will redesign the layout of a simple page with no interaction for the Little Lemon's mobile version of their website.**

No. In your final project, you will redesign an interactive table reservation element, following the specifications you will receive to complete your project.

**You started working on the Little Lemon project. You're focusing on designing the website. Is this all that UX involves?**

No. UX includes everything related to all the interactions that a user has with a company, its services and products.

**You are redesigning the Little Lemon website and you want to make sure that you prevent users from doing things they shouldn't. And if they end up making a mistake, you want users to be able to fix it easily. Which UX usability component is best described above?**

Errors. That's right. Good usability tries to prevent errors from happening and provide an easy way of fixing mistakes.

**You really want to get started with the UX process and are trying to recall what the order of the stages are. Which option presents the right order?**

Empathize, define, ideate, prototype, test.

**Which of the following is part of the UI of a digital product? Select all that apply.**

- How information is laid out is part of the UI.
- The colors are part of the UI.
- The text is part of the UI.
- What response you get when you click something is part of the UI.
- The icons are part of the UI.

**In Figma, the right sidebar displays properties organized in three different panels: design, prototype and inspect.**

Yes. The panels in the right sidebar are design, prototype and inspect.

**Does a customer journey map show the steps someone takes to complete a task?**

Yes. It presents the steps someone takes to complete a given task. It can also identify their emotions along the steps as you track the UX Goals.

**Is the persona a real person?**

No. The user persona is a fictional character profile that represents the main clientele of a company. It's a realistic model of the people you are seeking to assist.
