1. Why would you use a progress indicator in form design? Select all that apply.

1 / 1 point

☒ Users can see where they are in the flow.

✔ **Correct**

Correct! The user can see how many more steps are left to complete on the form.

☒ Users can go back and review content.

✔ **Correct**

Correct! Users can go back to review the content in case they made a mistake.

☐ Users can see the time left to complete the form.

2. Most websites require that a password consists of a mix of lowercase and capital letters, symbols and numbers. Should you provide clear instructions giving the user immediate feedback on their choice of password?

1 / 1 point

☒ Yes

☐ No

✔ **Correct**

Correct! You should provide guidance for users to compile their passwords.

3. Why do you space input fields? Select all that apply.

1 / 1 point

☒ To implement logical grouping to make the form more understandable.

✔ **Correct**

Correct! Spacing input fields allow the user to identify which part of the form they are addressing.

☐ To make the UI more appealing.

☒ The user can identify the labels that refer to the input.

✔ **Correct**

Correct! Spacing input fields allow the user to identify the labels that refer to the input, for example, 'password' and 'e-mail' required.

☒ The user can see that each field is unique.

✔ **Correct**

Correct! Spacing input fields allow the user to see that each field is unique.

4. A component, such as a button, cannot be reused on a website or an app.

1 / 1 point

☐ True

☒ False

✔ **Correct**

Correct! A component is any part of your design that can be logically grouped, which is thought of as stand-alone and can be reused.

5. Can a header be considered a component?

1 / 1 point

☒ Yes

☐ No

✔ **Correct**

Correct! Rather than creating the header from scratch for every page, you could construct a header component and reuse it.
