**<https://www.youtube.com/watch?v=6Bw0n6JvwXk>**

**Based on the video you just watched, the first heuristic is the visibility of system status, which means that predictable interactions can cause the user to find it difficult to use the product.**

False. The first heuristic principle is the visibility of system status which means that the user should know exactly what the system is doing and what state it’s in. Predictable interactions create trust in the product as well as the brand.

**As a UX UI designer, which of the following do you think is important when designing a form? Select all that apply.**

Space the inputs on the form more consistently

By spacing these inputs more consistently, the user can see that each is unique and what label refers to each input.

There must be clear instructions to complete the form and a password strength indicator.

The form must provide clear instructions with a strength indicator giving the user immediate feedback on their choice.

The language must be clear and specific.

The language should also be clear and specific to whatever section of the form the user is currently in.

**A design system is a set of reusable pre-made design components and patterns that can be used to design products at scale.**

True. A design system is set of reusable pre-made design components and patterns that can be used to design products at scale, for example, Google's Material Design and IBMs Carbon Design system.

**The current Little Lemon website design, based on all of Tilly’s feedback, violates Ram’s, Nielsen’s and Schneiderman’s design methodologies. How does the Little Lemon website violate Rams 10 principles of good design? Check all that apply.**

Makes a product useful.

The current Little Lemon website design violates Rams principle number 2 “Makes a product useful.”

Is thorough to the last detail.

The current Little Lemon website design violates Rams principle number 8 “Is thorough to the last detail.”

Is aesthetic.

The current Little Lemon website design violates Rams principle number 3 “Is aesthetic.”

Makes a product understandable.

The current Little Lemon website design violates Rams principle number 4 “Makes a product understandable.”

**Content design involves presenting the content on your website in a meaningful way that will promote your products. It helps to align your client’s business and UX goals and assists in aligning your content around your personas and scenarios.**

True. Content design involves presenting the content on your website in a meaningful way that will promote your products. It helps to align your client’s business and UX goals and it also assists in aligning your content around your personas and scenarios.
