---

1. How does the Open Graph Protocol (OGP) name the meta tags?   1 / 1 point

○ using id attribute

○ using name attribute

◉ using property attribute

✓ **Correct**
That's right! Naming OGP meta tags inside the property attribute won't enable social media to properly identify OGP properties.

---

2. Each property in the Open Graph Protocol starts with 'ogp:'   1 / 1 point

○ True

◉ False

✓ **Correct**
That's right! The property value starts with 'og:' instead of 'ogp:'

---

3. Which property should be used to define a URL of an image that must display when the website is shared on social media?   1 / 1 point

○ og:url

◉ og:image

○ href

○ src

✓ **Correct**
Feedback. That's right! The image property declares the url of the image that must be shared.

---

4. Which property is used to define the language of the content being shared?   1 / 1 point

○ og:lang

◉ og:locale

○ og:description

○ og:type

✓ **Correct**
That's correct! The locale contains abbreviated information regarding the language.

---

5. The type property defines the type of the content. For example: 1 / 1 point

```
1    <meta property="og:type" content="website" />
```

Which property would mention the name of the website?

○ og:title

○ og:description

◉ og:site_name

○ og:name

✓ **Correct**
That's right! The name of the website is mentioned through this property.

6. When sharing your blog post, which property would you use to provide the link to the actual post?

- ○ og: image
- ◉ og:url
- ○ og:description

✓ **Correct**
That's right! The post url is defined with the og:url property.
